

REMOTE TANK LEVEL and BUND MONITOR

the
complete
tank and
bund
monitoring
system

WatchmanPlus –
the most complete tank monitor yet!

Watchman *Plus* is a revolutionary wireless solution allowing remote monitoring on both the tank level and the tank bund area. Benefits include –

Pro-active bund and tank level monitoring

1,000 metre operational range

Updates every hour

Up to five year battery life

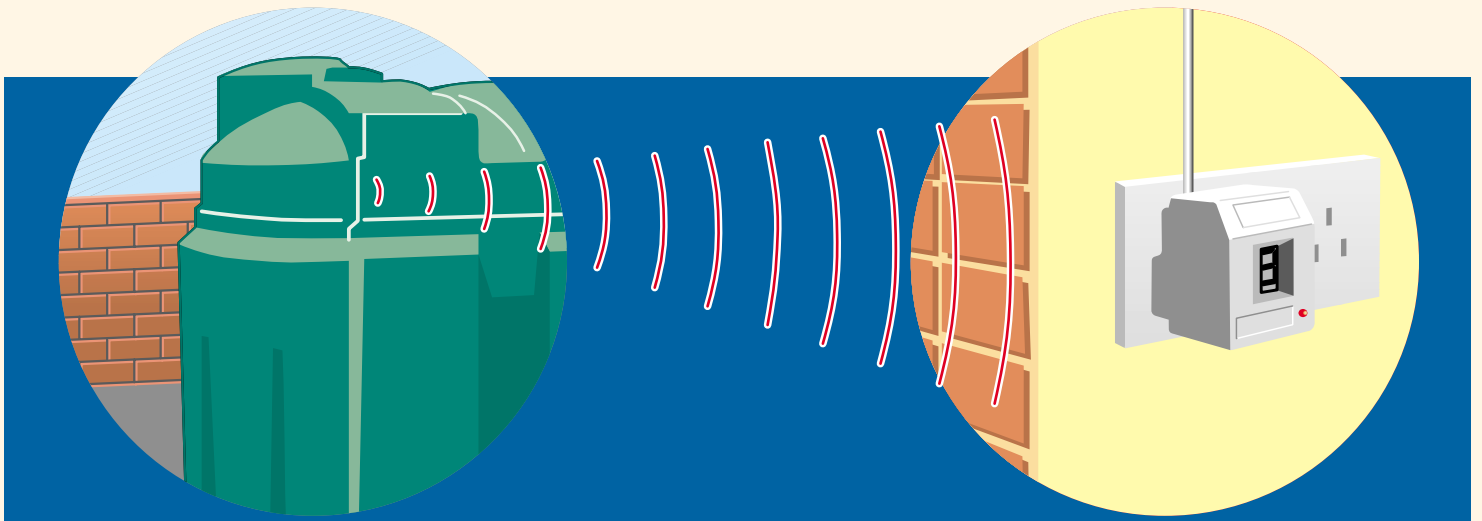

Operates with FullStop overfill alarm

Visual alarm for low level or fluid in bund

Compatible with telemetry for automatic order trigger

**Any fluid detected inside
bund is indicated on
WatchmanPlus
and FullStop**

Watchman *Plus*

The Watchman*Plus* regularly monitors your tank level and checks for fluid in the bund area

1 A probe and bund sensor are fitted inside your storage tank. Using new technology it senses the level of liquid and its small transmitter sends this information out by regular radio signals up to 1,000 metres, right into your premises.

2 Once your Watchman*Plus* is plugged into an electrical socket you can read the level of liquid in your tank from its clear display – so no need to go out into the cold to check your level.

3 Your Watchman*Plus* measures the level of liquid in your tank in tenths. When the tank level is low or fluid is present in the bund area a red warning light lets you know.

Environmental protection Your Tank Signal System will allow deliveries to be made using the FullStop overfill alarm. This improves environmental protection by helping to prevent overfills.

Sensor Systems are proud to support these trade organisations and to have received these awards and approvals:
