

DELIVER 10% EXTRA in 3 out of 4 deliveries

Avoid
overspills

Make deliveries
faster and safer

Fill to 95% capacity
every time

Studies show that three out of four deliveries fail to fill the storage tank up to the maximum safe level. The FullStop overfill alarm electronically senses the level of fluid in the storage tank and allows drivers to monitor the fill and to fill right up to the safe level every time. It operates over a range of up to 400 metres. The main features and benefits include –

Operates on any tank

Helps prevent spills

Maximises tank capacity usage

400 metre wireless range

Audible and visual alarms

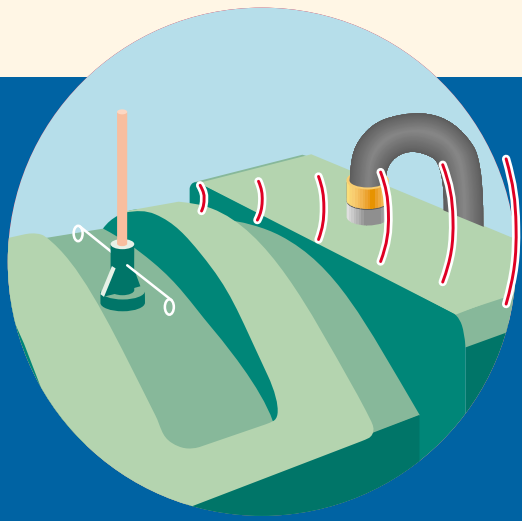

Operates with Sensor Systems Watchman and Ultiman

Updates every second

Indications in 1/10th

Universal hand set

FullStop
OVERFILL ALARM

The FullStop means fewer, faster, safer deliveries

The FullStop overfill alarm operates in conjunction with Sensor Systems' Watchman and Ultiman wireless tank level gauges.

The FullStop is activated by a simple, one-button action when it is within 50 mm (2 inches) of the tank transmitter. It then indicates to the driver, visually and audibly, the fluid level inside the storage tank.

This confirms to the delivery driver that there is room to start the filling operation and allows the fill to be monitored so that the tank

can be filled to the maximum safe level.

Sensor Systems tank transmitters and probes are calibrated so that the FullStop gives an early warning to the delivery driver when the tank is nearly full at 90%. It then advises when the tank is full at 95% of its physical capacity – leaving 5% of space above the fluid to allow for safe expansion through heat.

The FullStop has an operating range of up to 400 metres, allowing the driver to remain mobile during the filling operation.

Sensor Systems are proud to support these trade organisations and to have received these awards and approvals:
